EDUCATION

Western University

Bachelor of Science in Computer Science

London, ON, Canada

Expected April 2027

TECHNICAL SKILLS

Languages: Python, SQL, Java, C#, C++, Typescript, Javascript, HTML/CSS

Frameworks: Pytorch, TensorFlow, FastAPI, NumPy, Pandas, Skit-Learn, Matplotlib, React.js, Node.js, Redis

Developer Tools: Git, Linux, Unix, Azure, AWS, OpenAI, Cursor, Docker, Kubernetes, CI/CD, Github Actions

Gen AI: Prompt Engineering, MCP, AI Agents, RAG, Vector Embeddings, Claude Code, Codex

WORK EXPERIENCE

SmartOne AI

May 2026 – Current

Product Engineering Intern

Montreal, QC

- Creating a new robotics data service by conducting comprehensive market benchmarking and internal gap analyses, while standardizing workflows from sensor-based field capture for production ready deployment.
- Designing a small-scale robotics data collection pilot to validate workflow assumptions while recommending a scalable technical stack to optimize annotation and quality control standards for GTM production.

DevFortress

May 2025 – Aug 2025

Software Engineer Intern

Montreal, QC

- Developed a **TypeScript-based** Obsidian plugin with secure JWT authentication, handling login validation, secure token storage, and authenticated note scraping enabling seamless transfer of Markdown notes to Athena AI with sub-300ms latency, preserving metadata such as titles, tags, links, and headings.
- Ensuring this Obsidian integration builds on **Google Workspace Collaborative Whiteboard** used by **2,000,000+** Google Meet users to sync and secure meet minutes, notes and research.

LEADERSHIP & CLUB EXPERIENCE

3D Western 🤖

Sep 2025 – Apr 2026

Machine Learning Engineer

London, ON

- Engineering end-to-end **MLOps pipeline** for automated 3D printing, integrating computer vision for geometry validation and AI-driven slicer parameters to reduce manual preprocessing by 100%.
- Using AI to optimize the slicing presets and **PrusaSlicer CLI** for printing customization to generate production-ready G-code files through Docker containers.

Western Developers Society 🤖

Oct 2024 – Mar 2025

Backend Software Developer

London, ON

- Helped build the backend features of a full stack campus navigation tool using **React Native and Mapbox API** while using proper Git & version control practices working with 2 other developers.

PROJECTS

Turtle (Command Line Interface Agent) - QHacks 🤖🤖 | *Python, Ollama, Rich, Bash*

- Shipped a CLI Agent using **Ollama's Qwen 2.5 3B** model with tool calling through **Python scripts** and a built in UI with **Rich library** outputting terminal commands with explanations and yes/no feature for execution.

Agentify (RAG System) 🤖🤖 | *Next.js, Typescript, Python, FastAPI, Langchain, Vector DB, CI/CD, Docker*

- A production-deployed RAG system that enables users to upload PDF documents and query them conversationally making every LLM response strictly in the document's content using vector similarity search, hallucination detection, and a full CI/CD pipeline from code to cloud.

AI Pull Request Dev Tool 🤖🤖 | *Next.js, PostgreSQL, Typescript, React, TailwindCSS, OpenAI*

- Created a AI-powered code review tool for pull request analysis and code quality improvement using **Next.js, FastAPI, and OpenAI API** reducing manual code review with real time AI feedback.

Finguard AI (Financial Ledger) 🤖 | *Next.js, Python, FastAPI, PostgreSQL, Neon, Docker, CI/CD, Github Actions*

- Built a double-entry financial ledger with database-enforced balance integrity via PostgreSQL constraint triggers and Row-Level Security policies entries are immutable and tenant data is isolated at the DB layer.
