Education

Western University — London, ON, Canada
Bachelor of Science in Computer Science — *Graduating Dec 2026*

Technical Skills

Languages: Python, SQL, Java, C#, C++, Typescript, Javascript, HTML/CSS
Frameworks: Pytorch, TensorFlow, FastAPI, NumPy, Pandas, Scikit-Learn, React.js, Node.js, Redis
Developer Tools: Git, Linux, Unix, Azure, AWS, Google Cloud, Vertex AI, OpenAI, Docker, Kubernetes, CI/CD, PostgreSQL, ElevenLabs, Claude Code, Codex, Cursor

Work Experience

Bellwether Investment Management Inc. — Sep 2026 – Current
Software Engineer Intern — *Oakville, ON*

- Creating an full stack web app using **Next.js, FastAPI, PostgreSQL, & Google OAuth** to host client forms working directly with the leadership team to help advisors save **15+ hours** per week of manual processing.
- Building this tool as a solo developer bringing it to production using best software development practices and saving the company more then **$35000** while supporting **12000+ portfolio accounts**.

DevFortress — May 2025 – Aug 2025
Software Engineer Intern — *Montreal, QC*

- Developed a **TypeScript-based** Obsidian plugin with secure JWT authentication, handling login validation, secure token storage, and authenticated note scraping enabling seamless transfer of Markdown notes to Athena AI with sub-300ms latency, preserving metadata such as titles, tags, links, and headings.
- Ensuring this Obsidian integration builds on **Google Workspace Collaborative Whiteboard** used by **2,000,000+** Google Meet users to sync and secure meet minutes, notes and research.

Leadership & Club Experience

3D Western — Sep 2025 – Apr 2026
Machine Learning Engineer — *London, ON*

- Engineering end-to-end **MLOps pipeline** for automated 3D printing, integrating computer vision for geometry validation and AI-driven slicer parameters to reduce manual preprocessing by 100%.
- Using AI to optimize the slicing presets and **PrusaSlicer CLI** for printing customization to generate production-ready G-code files through Docker containers.

Projects

Speech Therapist Platform - Hack the North | *Expo, Node.js, Typescript, Python, Gemini, MongoDB*

- Built at Hack the North coming top 36 of 450 teams using React Expo hosted on Vercel, audio files on an S3 bucket connecting to MongoDB and ElevenLabs API for feedback from an agent. It analyzes speaking patterns and delivers personalized coaching to help communicate with more clarity, confidence & fluency.

Turtle (Command Line Interface Agent) - QHacks | *Python, Ollama, Rich, Bash*

- Shipped a fully local CLI agent using Ollama's Qwen 2.5 3B model with tool-calling, translating natural language into executable terminal commands via a Rich-based terminal UI with a yes/no confirmation gate before execution

Agentify (RAG System) | *Next.js, Typescript, Python, FastAPI, Langchain, QDrant, CI/CD, Docker*

- Built and deployed a production RAG system across a 6-part stack (Next.js, FastAPI, LangChain, Qdrant, Docker, CI/CD), enabling conversational PDF querying via vector similarity search with a hallucination-detection layer constraining responses to retrieved content.

LLM Chatbot Prompt Improver | *Chrome Extention, Typescript, Express, Vitest, Redis, Azure, Openrouter*

- Built and deployed Prompt Polish, a Chrome extension with **83+ downloads** using a rate-limited Express/Redis backend on Azure, that rewrites user prompts in-place across ChatGPT, Claude, Gemini, Grok and Deepseek.

Finguard AI (Financial Tool) | *Next.js, Python, FastAPI, PostgreSQL, Neon, Docker, CI/CD, Github Actions*

- Built an AI-powered financial tracker generating SQL queries from user input, integrating Plaid across its network of 12,000+ supported institutions, with Row-Level Security enforcing per-user data isolation at the database layer.
